

Our service offerings are directed at **innovative companies**, we offer services smart companies should be running with.

R&D Tax Incentives

At AB&H we have experience across many domains and we can analyse your projects and then describe, in concise detail, the Core and Supporting Activities of your project(s) in the format that complies with the guidelines to register for the Federal Government's R&D Tax Incentive. Our experts can then determine the allowable Total Notional Deductions and provide detailed instructions on how to claim the incentive via your annual tax return

Professional Training

AB&H Technology Services can train you in:
Project Management
Application Development
Business Case Development
Configuration Management
Training is tailored to suit the needs of your business.

Agile Project Management

The AB&H approach to Agile Project Management is to find and apply an appropriate balance (the sweet spot) to project management, so that deliverables are made without abandoning proven and reliable project management processes and practices.
Change is good but change must be managed!

Application Development

As with all software development projects, the first step is planning, followed by development and deployment. At AB&H we ensure that the planning process requires consideration of goals and how the application will be used. We understand the importance of elaborating requirements and using them as a basis for the customer acceptance testing, so that an objective assessment can determine if the final product is fit for purpose.

If you wish to discuss the needs of your company in more detail, please contact David Hutson
